

Juniper Beach Diesel Spill

Louisville, KY - August 2007

A semi truck with failing brakes ran into the Juniper Beach boat ramp and ruptured a saddle tank. Approximately 40 gallons of diesel fuel was spilled.

An environmental company estimated clean up to take two days using booms, pads, and a vac truck.

First responders on-site were the Louisville Fire Department using C.I.Agent® for the first time.

C.I.Agent Solutions® personnel also responded by delivering product and assisting Chief Fredricks in containing and cleaning the spill. A boat and hard boom were deployed, but actually hindered the clean up. The vac truck was not needed.

C.I.Agent® Costs Comparison

	C.I.Agent®	Environmental Crew (had they not used C.I.Agent)
Clean Up Period:	3 hours, 6 man hours	estimated 2 days, 4 men
Materials:	30 lbs. of C.I.Agent®	pack of absorbent pads, 160 ft. of boom, 50 ft. hard boom, boat
Product Retrieved:	15 gals. of diesel fuel,	350 gals. of water and diesel fuel
Waste:	approximately 135 lbs. of controllable waste	10,800 lbs. of water 320 lbs. of waste
Total Cost:	\$1,205	\$20,000 (approximately) (verbal by contractor)
